COVID-19 Vaccine Codes and PC-ACE Software Update

In anticipation of the availability of a vaccine(s), for the novel coronavirus (SARS-CoV-2) in response to the coronavirus disease 2019 (COVID-19), the American Medical Association (AMA), working with the Centers for Medicare & Medicaid Services (CMS), created new codes for the vaccine and the administration of the vaccine. To prepare for the vaccine administration claims, the PC-ACE software is also updated and ready for providers to download.

If you intend to administer the COVID-19 vaccines when they become available, or the new monoclonal antibody bamlanivimab, especially if you intend to roster bill these codes, please download and install the new release of PC-ACE. This release includes the coding structure, currently comprised of both a HCPCS Level I CPT code structure issued by the American Medical Association (AMA) and a HCPCS Level II code structure issued by CMS. Together, these codes support the administration of the COVID-19 vaccines and the monoclonal antibody infusions, as they become available; this structure includes the codes for bamlanivimab. This code structure was developed to facilitate efficient claims processing for any COVID-19 vaccines and monoclonal antibody infusions that receive FDA EUA or approval. CMS and the AMA are working collaboratively regarding which codes to submit for COVID-19 vaccines and administration. Most of these codes are not currently effective and not all codes will be used. We will issue specific code descriptors in the future. Effective dates for the codes for Medicare purposes will coincide with the date of the FDA EUA or approval.
